CORAL SENSE

LIVINGSEAS

Padang Bay

The largest man-made
coral site in Bali

Our restoration sites

A diver in a black wetsuit and mask is underwater, holding a large, dark, branching coral structure. The diver is positioned in the center-left of the frame, with their body angled towards the right. The background is a clear, light blue water. The coral structure is complex and has many small, dark, branching parts. The diver's fins are visible, and they appear to be holding the coral with both hands. The overall scene is a vertical composition, typical of a poster or a tall social media post.
